DETAILED ACTION

1. Claims 7-23 stand withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to non-elected inventions.

Claims 1-6 read on the elected invention and are being acted upon.

2. Applicant's amendments, remarks, and drawings, filed 3/29/04 and 6/21/04, are acknowledged. In view of Applicant's amendments, specifically the change of the term "associate with" to "stacking" and the inclusion of a new limitation that one or more amino acids be derivatized, all previous rejections have been withdrawn.

3. The drawings submitted 3/29/04 have been found acceptable.

4. The following are new grounds for rejection necessitated by Applicant's amendment.

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claims 1-6 are rejected under 35 U.S.C. § 112, first paragraph, as the specification does not contain a written description of the claimed invention, in that the disclosure does not reasonably convey to one skilled in the relevant art that the inventor(s) had possession of the claimed invention at the time the application was filed. This is a new matter rejection.

The specification and the claims as originally filed do not provide support for the invention as now claimed, specifically:

A) the recitation of "chemically derivatising one or more amino acid residues of the precursor antibody" in Claim 1.

Applicant indicates that support for the new limitation can be found at pages 17 and 22 of the specification. It is noted, however, that pages 17 and 22 disclose only specific examples of the method of the instant claims. Page 17 discloses a specific method of thiolation of an undisclosed human IgG and not the generic method of the claims. Likewise, the disclosure at page

22 comprises a discussion of specific results achieved by specific methods, again, not the generic method of the instant claims. Also note that the disclosure at page 17 is silent regarding chemically derivatising one or more amino acid residues and page 22 discloses only a "probable" mechanism in which "cryptic" amino acid residues might be derivatized with iminotholamine, and then only employing "certain buffers". Accordingly, the specific disclosures of the specification cannot provide sufficient support for the generic method of the claims.

7. No claim is allowed.

8. Applicant's amendment or action necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 C.F.R. 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
